

Cost of One Inch of Manhattan Water Applied to Your Lawn

Formula: Amount of water applied x lawn area x 0.62 = gallons

1 inch x 1,000 square feet x 0.62 = 620 gallons of water

Examples: 1 x 5,000 x 0.62 = 3100 gallons requires 4.2 units = \$15.47

A 5,000 square foot lawn would cost \$15.50

1 x 7,500 x 0.62 = 4650 gallons requires 6.2 units = \$20.43

A 7,500 square foot lawn would cost \$20.50

1 x 10,000 x 0.62 = 6200 gallons requires 8.2 units costs \$25.39

A 10,000 square foot lawn would cost \$25.50

A unit of water in Manhattan is 750 gallons

0-2 units is \$8.03 total

3-20 units is \$2.48 per unit plus the \$8.03

21-400 units is \$2.11 per unit plus the \$8.03
