History

Kansas State University began as the Bluemont College in 1858. The University was founded as a “land grant” public college with mandatory engineering, agriculture, and military science programs under the Morrill Act of 1862. The act allocated 30,000 acres of public land to each member of the Congressional Union. The college expanded in 1875 to its current main campus between Denison and Manhattan Ave.

The diverse planting throughout university grounds creates a natural laboratory for the Landscape Architecture and Agriculture & Horticulture programs at the school. Over 100 different species of trees are planted throughout the University’s 664-acre main campus. These trees offer great beauty and historic value to the campus, with many trees predating the original 1875 campus buildings.

The Tree Walk provides an opportunity to learn and relax amongst the diverse collection of trees on campus. Along the Tree Walk, enjoy the beauty of the campus and learn about native Kansas trees as well as trees adapted to the area (USDA plant hardiness zone 5). The 1.5 mile tree walk begins and ends at the Student Union and will take approximately one and a half hours to complete.
